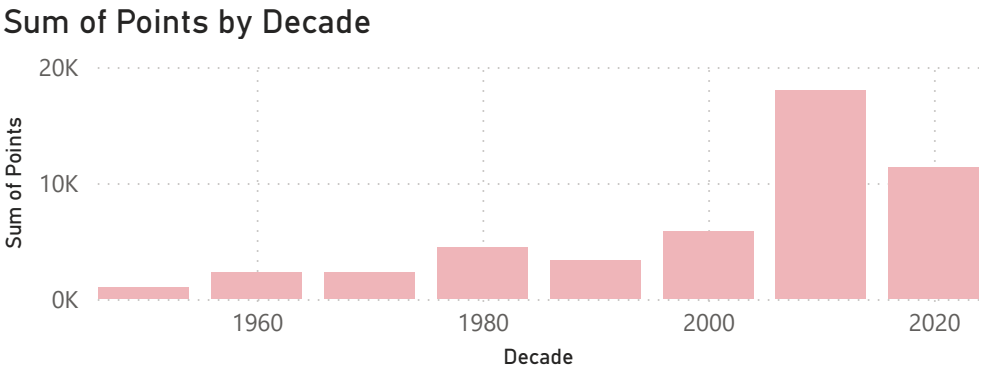
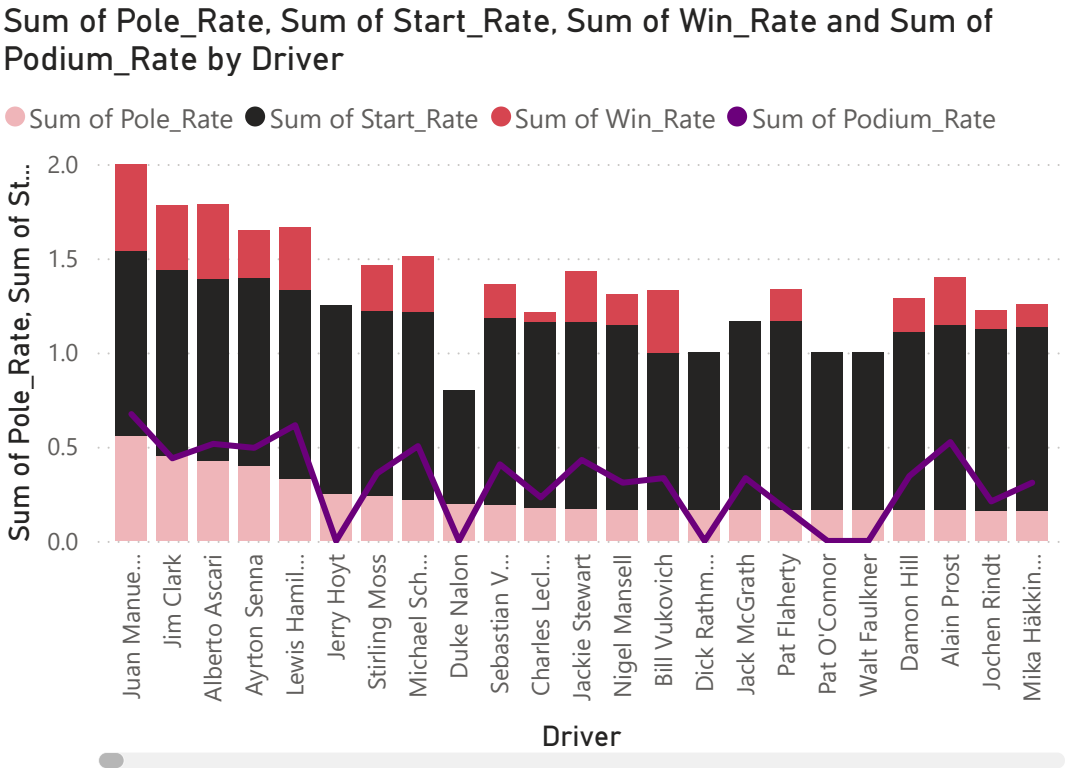
F1 Drivers' Performance Overview (1950-2023)



868
Count of Driver

47
Count of Nationality

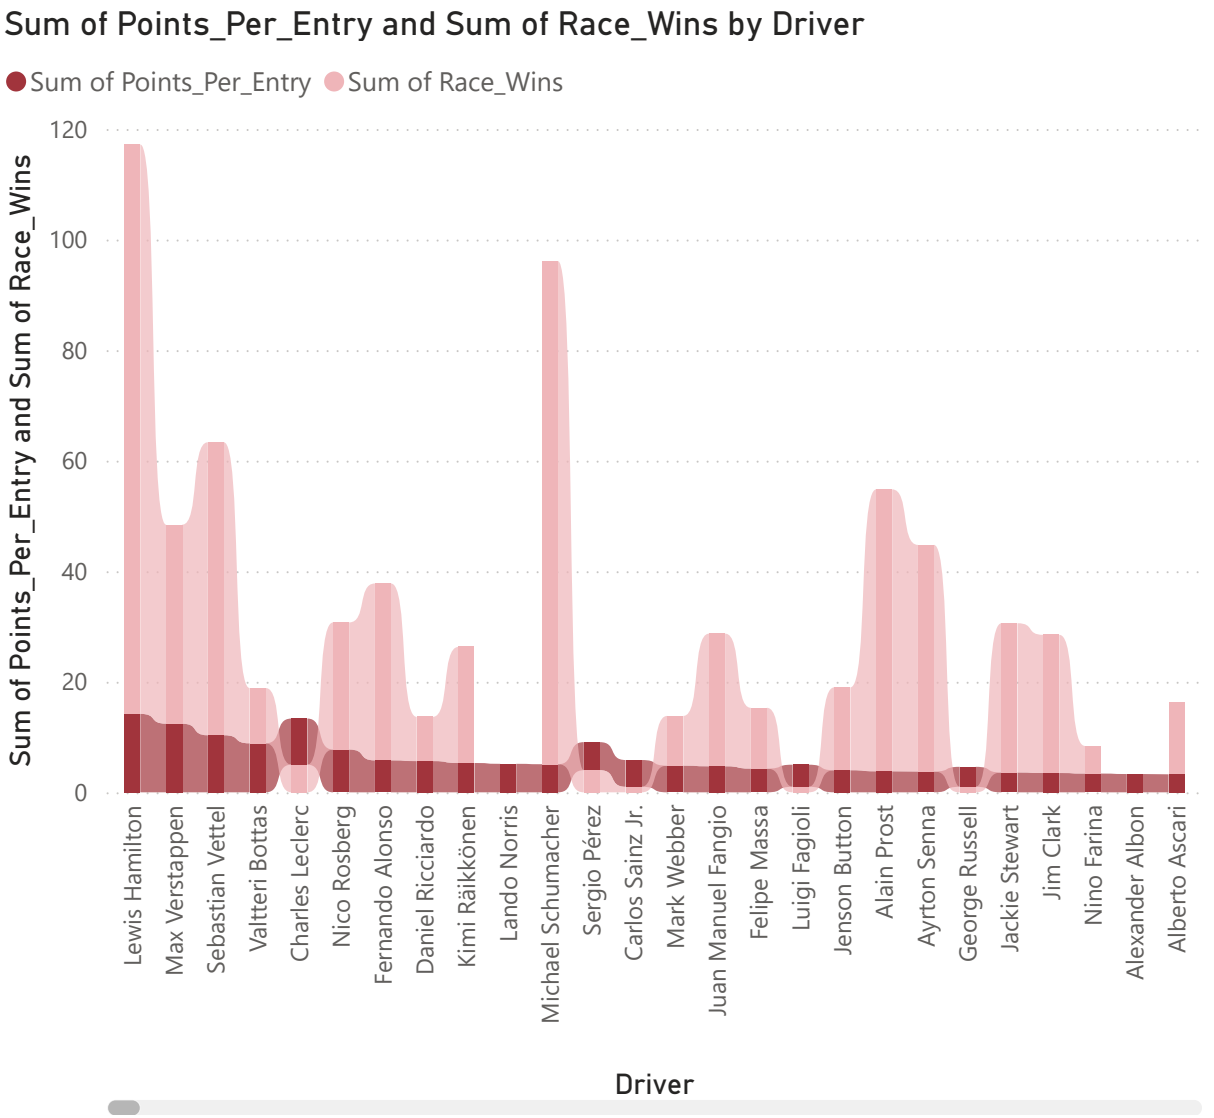


*Points have skyrocketed in the 2010s and 2020s due to scoring system changes.

*For many drivers pole rate is proportional to win rate.

***The "Sunday Specialist":** Some drivers have a much higher Win rate than their Pole rate. This suggests they are better at overtaking and race management than raw qualifying speed (e.g., Lewis Hamilton).

F1 Drivers' Performance Overview (1950-2023)



*Hamilton represents the **High Win / High PPR** category.

*Before 2024, Lando had 0 wins but a very high PPR for a non-winner. This is a **Leading Indicator** of a future champion.

*Charles has **higher Points per race (PPP)** but lower wins. Leclerc's profile identifies a 'Conversion Gap.' High PPR maintained despite lower win frequency suggests that **external factors (Strategy/Reliability) are the primary bottleneck**, as the driver's raw speed.
